IDEAL CUSTOMER PROFILE

net2phone can help any business whether a small mom & pop shop or a Fortune 500 enterprise. With our hosted unbundled and bundled options, we can provide solutions for every type of business, with any budget, and in any industry. If a business is looking for a feature-rich, high value, low cost solution, with an unmatched calling plan, they should be talking to net2phone.

CUSTOMER TESTIMONIALS

"We recently relocated our business and with move came the need to replace a 20+ year old PBX system with big monthly bills. After investigating different VoIP providers we choose Net2phone because of their expertise and professionalism. They made us feel that our small business was important. The other guys left us feeling too small for them. We converted 2 weeks prior to the move so everyone could get used to the new system and when it came time to move we had a plug and play system that worked perfectly! Our conversion/setup coordinator was just marvelous! He did everything asked and more even working on a Sunday night to get us ready to port. The online training and additional set up guidance received was extremely on point and they tailored our system to fit our needs perfectly. We are very happy with our choice and confident that Net2phone will be there for us!" - Doug King - President - Switches Unlimited Inc

QUALIFYING QUESTIONS

- Do you have an on-premise phone system that is difficult to manage and expensive to support?
- Do you have remote employees and offices you wish to connect?
- Do you want the ability to receive calls even when not at your desk or in the office?
- Do you want to offer your customers more efficient ways to reach you?
- Are you being invoiced with heavy toll free, international, and long distance charges?
- Do you have international customers, vendors, or offices?
- Are you paying extra for features of your phone system?
- Would you benefit from combining several methods of communication under one platform?
- Would you benefit from the ability to send and receive texts from customers, directly or into departments?
- Would you benefit from analytics such as communication metrics or call and chat engagement?
